FLAT ROOF

NEW

- Pre-installed roofing
- Crystal glass dome
- Double-walled insulated upstand RAL 9005
- Updated EcoPower Insulation Element based on 14cm PIR

Bitumen

EPDM

PVC

The Intura SunTube daylight sun tunnel system transports natural daylight to dark areas in any desired space under a flat or sloped roof. The dome is made of crystal glass, making it quiet, strong, self-cleaning, and durable.

The innovative Intura SunTube daylight sun tunnels are the ultimate solution to transform your home or workplace into a healthy and pleasant environment with natural daylight. Our crystal glass light-capturing dome captures natural daylight and channels it deep into your home or business through an advanced reflective tube. The soft, diffused light is evenly distributed by a stylish ceiling plate, filling every room with bright, natural light.

The Intura SunTube, available in diameters of Ø25, Ø35, or Ø55 cm, is a versatile daylight tube perfect for both residential and commercial spaces. This sun tunnel provides an ideal daylight output and ensures maximum illumination in areas such as living rooms, bedrooms, bathrooms, offices, meeting rooms, hallways, and retail spaces.

The Intura SunTube is suitable for both new construction and renovation projects, regardless of the type of roof. Make the most of every space and experience the power of natural daylight with the Intura SunTube!

Intura. SunTube

PITCHED ROOF

Intura SunTube daylight tubes are also ideal for installation on sloped roofs. The double-walled insulated upstands of the SunTube25, SunTube35 and SunTube55 come standard with Leadax (lead substitute made from recycled PVB), making them easy to install on a tiled roof.
